Easy Text Effects Overview

You can add custom styles using one or more of the following effects:

Bevel

Add various combinations of highlights and shadows to a layer.

Stroke

Outlines the object on the current layer using color, a gradient, or a pattern. It is particularly useful on hard-edged shapes such as type.

Color

Fills the layer's content with a color

Drop Close Shadow

Works identically, as Drop Shadow, but only in symbol rectangle bounds, defined in Spacing.

Style Options

All style options like Distance, Angel, Position, BlendMode work the same way as in the Photoshop. Easy Text hasn't all style options, that has Photoshop, but in the next updates we are planning to add all functionality.
